

Contract Change Management - NEC

Embracing contract change and improving business performance

What is CCM Contract Change Management?

CCM is a collaborative and workflow IT business support system to manage the rigorous contract change processes defined by the NEC contract in the Construction market sector.

CCM integrates business processes across the enterprise and with key partners, suppliers and clients to enable fast and effective collaborative communications between all parties. The innovative CCM application uses workflow to:

- Capture and automatically manage the complete project change lifecycle
- Trigger risk management decisions at key points
- Manage unlimited multiple projects across worldwide locations
- Distribute and manage commitment and performance information globally
- Provide multi-level project security according to business roles.

What can CCM do for me?

Improve your business operations

Using best practices in a structured environment, CCM automatically manages the contract change process. The solution can help reduce the cost of NEC implementation and the associated administrative overheads, while freeing up professional staff to focus on driving efficiency, quality and productivity for a more competitive business.

Reduce risk

CCM provides high visibility of all contract activities and a rigorous audit trail of communications to help minimise contractual disputes. Automatic risk management decision prompts and the early warning of threats and opportunities enable management to focus on issue resolution – and on potential cost savings.

Enhance collaboration and service delivery

CCM's information database stores all project contract data in one location. All parties, to a contract, subject to access permissions, can view the same information and communicate online for streamlined and collaborative decision-making. Senior management can remotely view and monitor performance for sustainable quality improvements.

Ease of information management

CCM provides a unified view of contract performance information. There is up to the minute visibility of a project's contract progress. All operations are recorded and time stamped to improve time and cost predictability. CCM's online information reporting service provides business access for the management control of contract service delivery.

Increase contract information security

CCM utilises world class access control permissions to ensure that the right information is seen by the right people at the right time. Archive copies of all contract information are maintained for the life of a contract.

Long term access to information in a CCM database

A CCM database is published electronically in ADOBE PDF format. This enables a business enterprise or other interested parties to access information post a CCM contract completion. The ADOBE PDF format is read only and is navigable by internal links, index or search functions.

Key CCM business benefits

- Increased productivity
- Improved predictability of outcome (cost & time)
- Reduced risk
- Compliance – Improved audit and visibility
- Long Term post contract access

Getting started with CCM

NEC facilitates the implementation of sound project management principles and practice. It encourages the transition from the adversarial culture to a collaborative one in construction. CCM facilitates working as a team through its use of workflow to define clear processes and procedures. It enables compliance with NEC requirements. The user interface is intuitive. This ensures a quick start to business process operation.

CCM is delivered as Software as a Service (SaaS). End User computer requirements are simple – a PC or laptop, an internet connection and a standard browser. No additional software is required.

About MPS

MPS is an award winning management services company formed by people with construction and IT expertise. Our mission is to provide the construction industry with innovative IT and software solutions and services that create business advantage. MPS is an IBM Advanced Business Partner.

Working with our business partners, we provide a range of products and services to enable improved process effectiveness and successful change management. Our portfolio includes business consultancy, system design, integration, implementation and complete system management and maintenance.
