New Zealand - Christchurch International Airport Limited Uses CCM System to Support NEC Contract

(London, 2 March 2010)

Management Process Systems Limited (MPS) of Cambridge today announced that their Contract Change Management (CCM) system, which supports the NEC form of contract, has been selected for the major annual pavement maintenance works project at Christchurch International Airport Limited (CIAL) in New Zealand. BECA New Zealand is the design and project management consultant, and Fulton Hogan of New Zealand and Australia are the contractors. The 12 week project involves the repair and resurfacing of airfield runways and taxiways. The contractors will lay over 15,000 tonnes of asphalt over 2 km of runways and taxiways in the process of resurfacing, patching and repairing them.

The MPS system will be used by the airport company, the consultant and the contractor. John De Bono, Manager Airport Facilities said, "This system has been very useful for effective collaboration on the project. It has saved time in communications and decision-making, which easily translates into saving dollars. We're pleased with the efficiencies it provides."

The CCM system manages the contract change processes set out in the NEC form of contract. Key benefits – which deliver reduced project risk and costs savings in contract administration include:

- timely agreement of change
- quality assured contract administration
- the early completion of final account
- improved contract management discipline
- real time visibility of risk and change issues
- improved change management
- quality assured processes and consistency of operation
- online access to risk spend information
- rigorous audit trail
- business performance reporting

An academic led research project by the University of the West of England (UWE) and the design of an assessment process enables customers to demonstrate the provable benefits from the use of CCM. The extensive use of CCM over the last decade by virtually all the major clients, consultants and contractors across the construction industry has established CCM as the leading contract change management system in the market place.

The Software-as-a-Service (SaaS) CCM system is delivered through an agreement with IBM for Server Managed Services. This agreement includes data centre, hardware equipment and software products, internet services, security and support services.

Robin Wilkin, Operations Director of MPS said, "Management Process Systems is recognised as the established industry leader in NEC contract management systems. CCM has been used on hundreds of projects in the UK. These include many large infrastructure works such as highways, railways and flood defence schemes. Christchurch International Airport is one of the NEC innovators in New Zealand who have benefitted from implementation of NEC, and we are pleased that they have recognised how CCM can maximize these benefits."

Editors Notes

Management Process Systems Limited is a management services company whose mission is to deliver innovative solutions that deliver identifiable business advantage to the construction industry. The company has extensive experience in the business processes, methodologies, information and knowledge requirements of the construction industry. This expertise and knowledge is re-enforced by a highly experienced capability to deploy Information Technology in support of business processes.

Information about MPS is at www.mpsprocess.com.
Information about CIAL is at <http://www.christchurchairport.co.nz/>
Information about BECA is at <http://www.beca.com/>
Information about Fulton Hogan is at <http://www.fultonhogan.com>

PRESS RELEASE – final 2.3.10

Contract Change Management (CCM) is an innovative and award winning British success story on the provision of IT support to a key business process. Thousands of construction industry professionals from most of the large UK PM, QS, Engineering, and Construction companies have been managing projects with CCM since 2001. These projects have managed over a million contract documents. A notable success has been the collaborative management of Early Warnings giving notification of new risks, and Compensation Events for notification of change.

Client customers include EDF Energy, Highways Agency, Environment Agency, Imperial College London, BBC Workplace, DEFRA, Metronet Rail (LUL/TfL), NAO, Welsh Assembly Government, several Local Authorities, and many more.

MPS are members of the NEC Users Group, Constructing Excellence, and the Association for Project Management. MPS is an IBM Advanced Business Partner.

The University of the West of England (UWE) report 'Improving NEC Contract Change Management with CCM' from their Knowledge Transfer Partnership (KTP) research project showed that 84% of CCM Users consider it as a 'good' or 'excellent' system. Significant tangible savings and intangible benefits are described in this award winning report on the benefits of using the CCM collaborative support system in the Construction Industry.

In the current economic climate our customers want to save money, preserve capital and reduce risk.

CCM, as an SaaS service, contributes to these objectives by -

1. Increased productivity

Increasing workloads and shortages of skilled managers have led firms to maximise efficiency of their professional staff. CCM enables remote working, less travelling, and more effective use of key resources. Managers spend more time on decision making and less time on administration. They are also able to manage more projects.

2. Improved predictability of outcome (cost & time)

Predictability of cost and time are two of the top ten key performance measures for business excellence as identified by Constructing Excellence. CCM improves predictability, minimises surprises, facilitates speedy agreement of change, and provides very early close out of final accounts.

3. Reduced risk

CCM facilitates early warning of liabilities and opportunities, improved risk management, increased collaboration, and therefore better-informed decision making. CCM also improves contract management, which reduces the level of risk to all involved.

4. Compliance - Improved audit and visibility

CCM is a secure quality controlled system, which enables compliance in the most challenging and demanding environments. Process visibility and audit ability facilitate improved communications for all participants. Coupled with its ability to transcend location, CCM provides a powerful management tool for all members of the project team.
